Summary

Computer Science graduate with hands-on experience in data analysis, SQL, workflow automation, and reporting. Skilled in extracting, transforming, and analyzing structured and unstructured datasets using Python (Pandas), SQL, and automation pipelines to generate actionable insights. Experienced in exploratory data analysis, statistical evaluation, predictive modeling, and building reproducible data workflows to support data-driven decision-making.

Skills

Data Analysis: SQL (MySQL), Python (Pandas, NumPy), Excel, Data Cleaning, EDA, Statistical Analysis
Visualization: Matplotlib, Seaborn, Tableau (Foundational Knowledge), Power BI (Foundational Knowledge)
Reporting & Business: KPI Tracking, Dashboarding, Stakeholder Communication, Requirement Analysis
ML / Modeling: Scikit-learn, Linear Regression, Decision Tree, Random Forest
Databases: MySQL, REST APIs, CouchDB, Data Warehousing Concepts
Tools & Dev: AWS (Foundations), Git, GitHub, Django, Docker, Docker Compose, n8n
Languages: Python, SQL, Java, JavaScript, Dart

Experience

CVS Info Solutions, Infopark

July 2024 – July 2024

Software Development Intern

- Analyzed API logs and database queries to identify performance bottlenecks and optimize backend data flow
- Improved query efficiency using SQL, enhancing system response performance
- Investigated data inconsistencies across systems to ensure data accuracy and reliability
- Collaborated with cross-functional teams to translate business requirements into technical solutions
- Documented recurring issues and solutions to streamline debugging and reporting workflows

MicroIT – Student Tech Initiative

December 2023 – January 2025

Co-Founder

- Led backend development for web and mobile solutions, focusing on API design, data workflows, and system architecture
- Built and deployed a B2B travel platform (VayoAura) supporting business workflows and client operations
- Developed and launched digital products requiring structured data handling and backend integration
- Analyzed user and operational data to improve platform workflows and feature decisions
- Tracked usage metrics and performance indicators to support iterative product improvements

AIIESEC in Amaravati

August 2023 – May 2024

Business Development Intern

- Ran outbound prospecting across email, LinkedIn, and cold calls, engaging 40–60 B2B prospects per week
- Pitched tailored value propositions to decision-makers, handled objections, and qualified leads based on fit and intent
- Scheduled discovery calls and partner meetings for senior team members, booking 5–6 meetings per month on average
- Maintained a structured lead pipeline with disciplined follow-ups, ensuring consistent engagement across multi-touch outreach sequences

Projects

Predicting Student Stress Levels During Exams Using Daily Habits

Python, Pandas, Scikit-learn, Matplotlib

- Analyzed behavioral and lifestyle datasets to identify patterns influencing student stress levels during examination periods
- Performed data cleaning, preprocessing, feature engineering, and exploratory data analysis on structured datasets
- Built and evaluated classification models using metrics such as accuracy, precision, recall, and F1 score
- Generated actionable insights through visualizations including correlation heatmaps and distribution analysis

Clara AI Automation Pipeline

Python, n8n, Docker, Docker Compose, JSON Processing

- Built an automated data processing pipeline to extract, transform, and structure unstructured call transcript data into JSON artifacts
- Designed workflow automation for data ingestion, transformation, version tracking, and structured output generation
- Implemented reproducible containerized execution using Docker Compose for scalable workflow orchestration
- Improved workflow reliability through modular processing and structured debugging

Task Scheduling Optimization in Distributed Systems

Python, PyTorch, NumPy, Data Analysis

- Designed and evaluated optimization models for multi-objective task scheduling using real Alibaba cluster workload datasets
- Conducted comparative benchmarking across multiple algorithms using quantitative performance metrics
- Analyzed workload execution efficiency, processor utilization, energy trade-offs, and scheduling outcomes
- Applied statistical validation techniques to compare optimization performance across experimental runs

VSynC – Smart College Companion Platform (Live on Google Play Store)

Flutter, REST APIs, Data Modeling

- Developed a live academic companion application that collects, structures, and serves institutional data including faculty information, academic records, attendance, and timetables
- Designed data models and backend integration for dynamic retrieval and management of structured academic datasets
- Implemented analytical features such as GPA/CGPA prediction and performance tracking using user-specific academic data
- Built scalable data handling workflows for personalized user-facing information delivery

Education

VIT-AP University

2022 – 2026

B.Tech – Computer Science Engineering

CGPA: 7.6/10

- Relevant coursework: Data Warehousing & Data Mining, DBMS, Data Visualization, DSA

Certifications

- AWS Academy Cloud Architecting (2024)
- AWS Academy Cloud Foundations (2024)
- CouchDB Distributed Database System (2024)
